Azure Cloud Migration

The Business Challenges

Companies who run SAP on premise are faced with critical challenges, including:

- Delivering new capabilities to the business on tight IT budgets
- Planning the right level of hardware capacity (over-provisioning to support peak volume periods, leading to underutilization at other periods of the year)
- Releasing new or updated SAP software

In address of these challenges, the predominant trend in business today is migration to the cloud. With a cloud model, IT investments shift from Capex to Opex.

At Sierra Digital, we partner with Microsoft and SAP to help companies migrate to the Azure Cloud. Our BlueSky solution offers an increased ability for organizations to rapidly spin up instances, delivering capabilities to business faster, with the agility and flex of Microsoft's secure infrastructure and business software. Azure enables innovations and allows clients to respond to market and business demand efficiently.

What Differentiates BlueSky

Sierra Digital is a Silver Partner of Microsoft and qualified for the Gold Partnership with technical credentials.

- Sierra has Certified Microsoft Enterprise Architects (AZ300 and AZ301) and Certified SAP HANA & SAP OS/DB Migration Certified Architects
- We have built out the Automation Platform to manage SAP landscapes in the Azure Cloud, white labelled as Symphony, that enables one-touch provisioning, monitoring, and automation routines
- We are heavily vested in helping customers migrate their SAP workload to Azure Cloud only.

Key Benefits

- Avoid cost of on-premises hardware; retire legacy hardware & software
- Faster time-to-market for SAP releases
- Avoid cost of over-provisioned hardware and physical data center space
- Reallocation of staff required to manage SAP infrastructure
