

# StreamLine<sup>SM</sup>

## Central Finance Consolidation

### The Business Challenge

In instances where multiple systems are producing financial data, which version of the truth do you choose to believe?

At Sierra Digital, we help companies consolidate ERP systems in order to centrally process business transactions & reporting, often to S/4 HANA, so that a single source of truth can be validated.

**StreamLine<sup>SM</sup>** Central Finance Consolidation takes human error out of the equation and accelerates implementation of S/4 HANA using Robotic Process Automation. StreamLine also features data consistency, matching, and account reconciliation using BlackLine, a global leader in financial consolidation.

### What Differentiates StreamLine

- **Automated Error Mapping:** Saves hundreds of hours of manual labor by preventing accumulations in the error queue.
- **Quantified Error Handling:** Customized AIF Error Analytics program quantifies the investment in CFIN error management over a period of time.
- **BlackLine Integration Products:** Account Reconciliation Products reconcile financial transactions; Matching Products verify data consistency between source and target systems.
- **Speed to Implementation:** Through Sierra's Connect Product, StreamLine helps you easily integrate non-SAP systems to SAP Central Finance.

### Key Benefits

- Single source of truth
- Landscape simplification
- Central error handling via AIF (Application Interface Framework)
- Real-time data replication
- The data elements and organization entities in the two systems are mapped for posting in Master Data Governance tools
- The first step in a successful S/4 HANA transformation
