

## Client Profile

Synergy is owned by the Government of Western Australia, represented by the Minister for Energy

## Business Challenge

- Synergy currently operates SAP BW 7.50 with a system size of 3-5TB. They do not currently utilize SAP Datasphere.
- Their ERP system is SAP ERP 6.0, and they maintain one live SAP BW system. In addition to SAP BW, Synergy employs BW on HANA and Azure for data warehousing. They also utilize native HANA modeling and a HANA sidecar approach alongside SAP BW.
- This setup highlights the need for a strategic data management approach to optimize efficiency and explore innovative solutions for data analytics and reporting at Synergy.

## Sierra Solution

Sierra was selected for our strong SAP presence, particularly our exclusive partnership with SAP to develop the datasphere assessment tool. We delivered:

- Conducted Readout Session: Detailed review and discussion of migration analysis findings.
- Detailed Report: Comprehensive PPT/PDF report on BW object migration to SAP Datasphere, including usage insights and migration feasibility.
- Overview Dashboard: Access to a one-week interactive dashboard in SAP Analytics Cloud for visualizing migration impacts.

## Results

Their internal development team is now advancing with the Datasphere implementation, with TCS onboarded as the implementation partner.

This collaborative approach ensures a streamlined and successful transition to leverage Datasphere for enhanced data management and analytics at Synergy.
